Since 2005, a popular and well-regarded extension of the program, 123D, is available on both Windows and Mac. Since 2008, AutoCAD has been able to work with 3D printers. AutoCAD is also available for the iPad. AutoCAD is available in more than 50 languages, with more than 50,000 language translations. AutoCAD uses certain techniques to speed up user interfaces to allow rapid entry of complex commands. In practice, the speed with which users can get to the point where they can work is more important than anything else in AutoCAD. The company's own professional support organization, Autodesk Knowledge Network, is designed to provide support and technical assistance to the AutoCAD community, and includes webinars, videos, and direct support. AutoCAD was named by Macworld in its "Best of the Best" Editors' Choice Awards for the seventh year in a row. There have been a number of websites and blogs created to provide AutoCAD tips and discussion on Autodesk's AutocadTips.com. Autodesk is a strong supporter of Open Design Alliance (ODA) which was created by Autodesk and has been rebranded since its original inception as Cadalyst. Autodesk has maintained a blog that offers tutorials and news updates. The main content on the AutoCAD blog is written by Autodesk employees. A highly sensitive DNA-based detection system for nucleic acid aptamers: transduction-mediated signal amplification. A novel DNA-based detection system that exploits the thermodynamic and kinetic stability of a fully double-stranded DNA platform has been developed for sensitive detection of nucleic acid aptamers. This system makes use of the fact that single-stranded DNA can be generated by strand separation and then displaced into a target solution by an equivalent amount of double-stranded DNA. After addition of target DNA to a solution of the functionalized DNA nanostructures, the aptamer-target DNA duplex is formed and displaced into solution by a second equivalent amount of duplexed DNA. Thus, a cascade reaction that occurs in solution can be visualized by measuring the intensity of the fluorescence of the fluorophore-labeled hairpin DNA as an indirect indicator of the amount of target DNA. With this transduction-mediated amplification system, we can achieve detection of picomolar concentrations of target DNA in a dynamic linear range of 3 orders of magnitude. The detection sensitivity of the developed system could be further improved by combining this signal amplification method with an in situ amplification method such as rolling circle amplification. This simple DNA-based detection system should be applicable to various DNA-based detection schemes such as DNA-based affinity chromatography. O.J. Simpson Says He's a Person of Color - and Black People Are Crazy O.J. Simpson, who was acquitted in a notorious double-murder case in 1995, thinks he's a person of color -- because, well, why not? "I'm a person of color. I'm black," the disgraced football great told Esquire. "So what? It means
