Influence of MHC class I and killer cell immunoglobulin-like receptor (KIR) expression on chronic Epstein-Barr virus (EBV) infection has been described in an increasing number of studies. The role of HLA alleles and KIRs in chronic EBV infection remains elusive in systemic lupus erythematosus (SLE). This study shows a significantly increased number of CD4(+)CD57(+) T cells in patients with SLE compared to controls. These cells might be related to the formation of auto-antibodies and the increased expression of cell surface CD25. However, number of CD4(+)CD57(+) T cells

The research program is an integrated series of laboratory investigations designed to study the relation of genetic regulation to the development and function of the mouse embryo. Three projects are included in this proposal, each including one of our research laboratories: (1) The study of the modification of placental basic proteins by hormonal and nutritional means and the study of the effect of such modifications on metabolism of the various species of the placenta during gestation; (2) The study of cytoplasmic inheritance and the mode of transmission of the streptozotocin-induced diabetes; and (3) The study of the mechanism of the induction of craniofacial malformations by tobacco smoking.The use of a sum of squares test for comparing the mean of two populations with non-normal distribution. Two methods for evaluating the mean difference of two populations by non-parametric tests are proposed and compared by Monte Carlo simulations. The Wilcoxon test, developed in 1965, is a strong test for the difference of the mean of two independent samples. In 1969, Mood received one of the Nobel prizes for devising the Wilcoxon test. The Mood-Witkin (MW) test is very close to the Wilcoxon test; however, the single-sample version of the MW test is severely biased under most conditions. In 1978, Werker developed another one-sample non-parametric test, based on a modified version of Wilcoxon's statistic (Ww). The proposal of this work is to develop an exact distribution of this new test statistic, allowing its use as a test for the mean of two populations, directly or as part of a two-sample procedure. In the two-sample case, two new tests are compared, the asymptotic F-test and the asymptotic F 6d1f23a050
