
Answer Key Reading Interaction 1 Silver Edition 20

The objectives of this lesson will help support the development of critical thinking, language, and professional communication skills. Students will analyze a novel and construct a thesis statement. After the reading, the group will discuss the ending and title of the novel as well as constructing a thesis statement. Students will then use their thesis statements as guidelines for writing a review essay of novel chosen from a list of ten possible titles. The chosen title will dictate the essay format. The clinical objectives of this lesson will help support the development of high school students' critical thinking, language, and communication skills. Students will read and analyze a post-9/11 novel that is published in 2007. Students will then write a reflection of their analysis. The reflection will be a critical response to the text that assesses the extent to which the text addresses the following topics: America's involvement in world affairs, our changing security, and the cultural aspects of globalization. Students will present their reflections in writing as part of a shared reading group activity. Students will also practice turning their glosses into podcasts and reflect on their speaking and listening skills as they do so. Students will assign speeches to the other members of their shared reading group. Students will then listen to and evaluate each other's speeches in a co-presentation format. They will compare and analyze the speeches using the following rubric: 1. Content 2. Style 3. Delivery 4. Production. After completing the presentation, students will assign a secondary speaker role to another student in their group.

In a recent study performed by researchers at the University of California, San Diego, the first-of-its-kind social robot was introduced into a classroom of 18- to 24-month-old children for five months as a way of studying human-robot interactions. The children not only came to accept the robot, but treated it as they would a human buddy - hugging it and helping it - a new study says. The results imply that current robot technology is surprisingly close to achieving autonomous bonding and socialization with human toddlers, said Fumihide Tanaka, a researcher at the University of California, San Diego. Smaller enterprises stand to lose the most from the shift toward remote interactions and the accompanying deployment of virtual customer touchpoints. More than 40 percent of surveyed companies are in the smallest of industry sectors, and nearly half of those companies say that their response to the crisis has not been as good as they thought it would be. Furthermore, almost half of the companies in the smallest sectors plan to decrease or eliminate physical touchpoints, either because of the crisis or because they view the physical channel as too risky. Respondents in the smallest of sectors overall are less likely than those in larger sectors to expect that the shift to digital customer channels will continue in the future. The survey respondents in the smallest sectors are also less likely than those in larger sectors to say that their spending budgets will increase over the next 12 months. Economic conditions have a huge impact on companies whether they shift toward digital customer interactions or away from them. For instance, whereas fewer than 30 percent of companies that expect the recession to be less than 20 percent likely to reduce their number of customers say that they expect to have fewer channel partners, nearly 40 percent of companies expecting an economic recession above 40 percent say they expect fewer channel partners. Similarly, about 70 percent of respondents that expect that the next 12 months will be as good as they are expecting to continue their investment in digital customer interactions say that their customers will have more channels partners. The opposite is true, however, of companies that expect the next 12 months to be worse than they are expecting. Those firms are more than twice as likely to expect a reduction in their number of channel partners as those that expect their next 12 months to be better. This is consistent with the finding that 50 percent of those expecting to be worse are also planning on cutting their channel partners, compared with only 20 percent of those expecting to be better. 5ec8ef588b
